

Add NextGen EDR & a New Level of Care

True integration of dental and
medical data drives simplicity
and better outcomes

“The QSI product offering NextGen EDR had many features that are considered best practice/state-of-the-art by the HIT Committee. In particular the product offered the most robust integration of key data elements between the electronic dental and medical records when demonstrated with the company’s EHR product, NextGen Ambulatory EHR.”

*2008 National Network of Oral health Access Healthcare (NNOHA)
[Appendix B Product Analysis]*

Integrate NextGen EDR with NextGen Ambulatory EHR and NextGen Practice Management for Meaningful Use

Better healthcare delivery happens in a health center or clinic when electronic dental record (EDR) technology is integrated into clinic-wide operations. Electronic integration of dental and medical clinical data, practice management software and administrative automation is a platform for growth, accountability, improved patient experiences, and a happy productive staff.

The value of full NextGen EDR, Ambulatory EHR, and PM includes:

- NextGen® Electronic Dental Record version 4.2 has been certified as an ONC-ATCB Complete EHR by the Certification Commission for Health Information Technology (CCHIT®).
- The dental practice gets comprehensive and seamless access to NextGen Healthcare's NextGen® Ambulatory EHR 5.6, a CCHIT Certified® 2011 Ambulatory EHR, additionally certified for Child Health, Cardiovascular Medicine with Advanced Reporting, Behavioral Health, and Dermatology. Combine with NextGen® Practice Management (PM) solutions to improve every aspect of the patient encounter
- Linked patient prescription history, medication management, and drug database makes critical information available chairside in real time
- Single-source practice management for the entire clinic with centralized patient appointment scheduling, accounts receivable, and billing management drives accuracy and productivity
- Meaningful Use incentive revenue becomes available to the entire clinic for revenue growth

Integration of the NextGen EDR system produces better outcomes in the dental practice:

- Graphical tooth charting, voice-activated periodontal charting, and smart-note technology improve patient treatment workflow, accuracy, and productivity
- Open and integrated access to all patient data enables better treatment planning
- Multi-specialty data capture palettes simplify data entry for frequent activities – smart notes, referrals, patient conditions, etc. – and can be customized
- Patient education modules improve treatment plan understanding by patient for increased acceptance and compliance
- Multi-lingual patient education modules enhance cultural sensitivity
- Overall practice reputation and clinical professionalism is improved with digital healthcare delivery

Simplicity and Better Treatment Outcomes are the Rewards of Full Digital Integration

Distinguish your interdisciplinary practice or facility in the marketplace and the community. Achieve true healthcare delivery integration with NextGen EDR, NextGen Ambulatory EHR, and NextGen Practice Management software. You, your professional colleagues, practice clinicians, and administrative staff will achieve a less complex, more manageable operation for a better patient experience before, during, and after each patient appointment.

Every patient benefits with treatment and healthcare delivery that's optimized for each patient's unique clinical, social, and financial circumstances. You'll create new levels of patient loyalty and word-of-mouth referrals based on your practice's consistent delivery of comprehensive care in a supportive environment.

NextGen Healthcare is the partner that delivers this performance. We provide the only seamless path in the marketplace to digital integration of dental and medical clinicals, office administration, and patient management, to support growth objectives and quality outcomes.

“ A patient gets better care because we can develop coordinated continuum of care plans. This is very important, especially for our high population of chronic condition patients at the Community Health Centers. Dentists can look up the meds list, and also see the patient's chronic conditions. When the patient presents again on the medical side, clinicians can see what took place on the dental side. Patient care really does improve because now it's a coordinated, integrated effort. ”

Roy LaCroix, Chief Executive Officer PTSO of Washington Seattle, WA

“A fully-integrated patient record and care model for both systemic health (medical) and oral health (dental) is needed for health information technology (HIT) standards, implementation, and interoperability to avoid discrepancies between records and to support quality of care, safety, and cost-reduction initiatives.”

Journal of the American Health Information Management Association (AHIMA)

Single Solution for Success

For more than 35 years, QSIDental™ and our NextGen EDR solutions have built a following in the dental industry because we've helped dental practices increase productivity, reduce risk, minimize costs, and improve patient care.

Dental practices, Federally Qualified Health Centers (FQHCs), and medical/dental healthcare facilities are implementing NextGen Healthcare's centralized, single-solution clinical administration platform for a good reason; it's a sound business and patient care decision provided by an experienced and proven industry leader. Physicians, dentists, clinicians, practice managers, and clinical administrators quickly feel the positive impact of adding EDR functionality to a facility's EHR and PM systems. Full, reciprocal access to patient dental and medical records is accessed from a single patient record to enhance patient wellness, safety, and treatment outcomes. Patient administration and billing management is integral to a single solution. Costs are controlled and providers capture all the clinical revenue to which they're entitled.

The NextGen Healthcare partnership drives trust and success

It doesn't matter where your practice or facility is on the timeline of EDR adoption or EDR integration with EHR and PM systems. NextGen® technology, expertise, and experience provide the partnership confidence critical to a digital implementation that meets and exceeds your expectations. Every day we successfully guide dental practices and health clinics through the strategic process to adopt and leverage our EDR, our Ambulatory EHR and Practice Management systems.

Access the power of dental and medical integration:

- EDR/EHR interface unique in the industry
- NextGen™ Electronic Data Interchange (EDI) for further integration and automation
- A single record regardless of healthcare services delivered to patient
- Improved patient communications
- Simplified compilation of UDS reporting data
- Centralized appointment scheduling, accounts receivable, billing management
- Automatic clinical data flow into charge entry
- Enhanced CHC encounter billing
- Centralized prescription management and drug database
- Direct access to NextGen Ambulatory EHR for allergies, medical history, and scanned information
- Graphical tooth charting
- Treatment planning
- Voice-activated periodontal charting
- Chart documentation featuring "Smart Note" technology
- Digital Radiography; X-Ray and Imaging
- Clear pathway and timeline to MU incentive payments

Find out how dental practices, FQHCs, and community medical/dental healthcare facilities are implementing centralized clinical administration. Learn why digital integration of the continuum of care is vital to simplified management and better patient outcomes.
